### Summary

Product-minded Full-Stack Engineer with 3+ years of experience delivering secure, scalable solutions. I believe technologies are tools to solve real problems, and my core engineering foundation allows me to move seamlessly between Web (PHP/Laravel/Next.js) and Mobile (Flutter). I specialize in high-stakes environments—integrating financial APIs (Plaid), recovering compromised systems, and automating server maintenance. I leverage AI for syntax to focus on Solution Architecture, adhering to the principle that "the best code is the part that never had to be written."

### Technical Skills

Production Stack:	PHP (Laravel, WordPress Core), Dart/Flutter, MySQL, REST APIs.
Foundational & Learning Repos:	Node.js, Express, React, Next.js, Java, C++.
Deployment & Ops:	AWS Lightsail (Instance Management), Linux Server Maintenance (Apache, SSL), Bash Scripting (Automation), Cloudflare (DNS & Security Rules).
Tools & Security:	Plaid API, Stripe, Git, Agile/Scrum, Log Analysis, Permission Hardening.

### Experience

2023 – Present	<b>Full-Stack Developer (Architectural Focus)</b> Zimozi solutions pvt. ltd <ul style="list-style-type: none"><li>• <b>FinTech Integration:</b> Architected and secured a high-stakes reporting system for US credit bureaus; managed complex <b>Plaid</b> and <b>Credhub</b> integrations with 100% data integrity.</li><li>• <b>Infrastructure Management:</b> Streamlined server operations on AWS Lightsail by creating custom scripts for automated backups, updates, and migrations.</li><li>• <b>Platform Security:</b> Proactively mitigated risk by performing log analysis and hardening file/folder permissions on compromised or sensitive web environments.</li><li>• <b>AI Velocity:</b> Utilized AI-assisted tools to accelerate code generation while acting as the primary "Quality Gate" for logic and security.</li></ul>
2022 – 2023	<b>WordPress Developer</b> Codzilla.net <ul style="list-style-type: none"><li>• <b>Bespoke Platforms:</b> Developed custom Real Estate and LMS platforms, prioritizing maintainable themes and secure custom PHP logic over bloated third-party plugins.</li><li>• <b>System Deployment:</b> Handled full lifecycle deployments for small business clients, ensuring robust performance and uptime.</li></ul>

### Education

2019 – 2023	<b>Benha Faculty of Computer Science and Artificial Intelligence</b> Bachelor of Science in Computer Science and Medical Informatics with GPA: 3.47
-------------	--

### Engineering Philosophy & Continuous Learning

I treat engineering as a commitment to adaptability. My GitHub serves as empirical proof of my ability to master new stacks and apply them to real-world scenarios:

- **Modern Frontend:** Developed a custom portfolio and various repos using **Next.js**, **React**, and **Redux** to master state management and SSR.
- **Backend Maturity:** Implementing **SOLID principles** and Laravel Jetstream/Passport in private repos to refine API authentication and architectural patterns.
- **Cross-Platform:** Leveraged the "basics" of UI logic to transition from Web to Flutter, shipping production-grade mobile/web applications.
